

ASPE TechSymposium2021

Harold Moret

Copper: A Key Element in Sustainable & Resilient Design

This session will help attendees gain a better understanding of how copper enables our world to work more efficiently, its contribution to resilient construction and infrastructure, and responsible production. The presenter will use up-to-date imagery to support the discussion.

Harold Moret is the Project Manager for the Copper Development Association Inc. (CDA). His responsibilities include providing training and technical assistance to architects, contractors, engineers, and others interested in the uses and benefits of copper and copper alloy materials for building construction. He also provides engineering and architectural assistance, technical development (codes and standards), and installation training to designers, specifiers, installers, state plumbing inspectors, and building officials. Harold has more than 30 years of professional experience in the building and plumbing and mechanical fields. He is an active member of AIA, ASPE, PHCC, UA, ACCA, and state inspector groups. His dedication, knowledge, and long experience in the building trade industry serve him well as an educator.
